PROJECT EXPERIENCE

AegisFlow AI — Offline Intelligent Intersection Operating System *Backend implemented*
Building an offline-first adaptive traffic-management system. Implemented the FastAPI backend, orchestration layer and decision-engine adapter with REST endpoints and WebSocket updates. Decision-engine test suite: 39 tests passed; shared-contract foundation: 11/11 tests passed. Vision, dashboard and controller integrations remain in progress.
Tech Stack: Python, FastAPI, REST APIs, WebSockets, pytest, Git/GitHub

Q-Rescue — Quantum-Assisted Ambulance Dispatch *Working prototype · Q-HACK INDIA 2026*
Developed a quantum-assisted ambulance-dispatch optimization prototype using QUBO/Ising formulation and Qiskit-based QAOA simulation, with evaluation against classical and random baselines. Built a Streamlit console and test suite for the prototype.
Tech Stack: Python, Qiskit (QAOA), QUBO/Ising, Streamlit, pytest

SafeFusion AI — Predictive Industrial Safety *Design stage*
Designing an industrial risk-monitoring system with real-time object detection, time-to-collision estimation and confidence-aware alerts. Planned components include thermal imaging, sensor-fault detection and a safety dashboard.
Planned Stack: Python, OpenCV, YOLOv8
